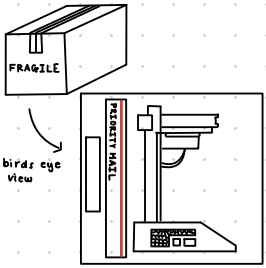
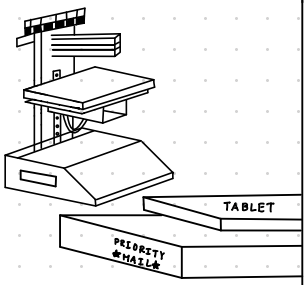
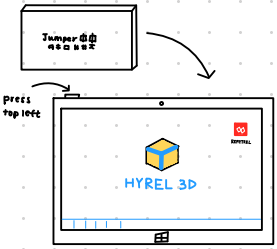
# Unboxing Storyboard



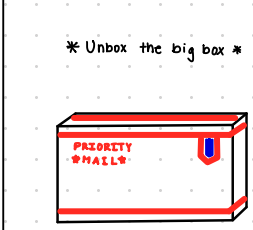
1) Upon opening the initial box, there should be the machine, one black box, and one larger white box.



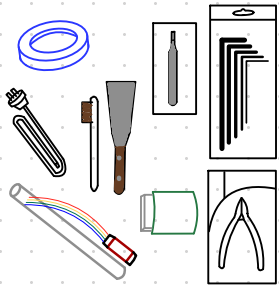
2) Take the machine and your two boxes out. The printer is heavy so you may want someone to help you take it out.



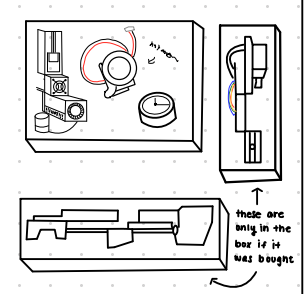
3) Carefully take the tablet out of the box and turn it on by pressing the top left corner



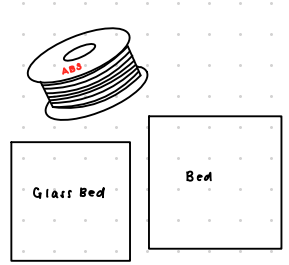
4) Carefully unbox the larger box.



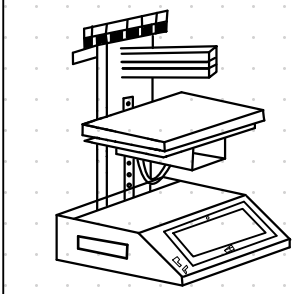
5) Components: Painters tape, bag: syringe, clay, extruder, injection heads, nozzle heads, hex set, pliers, tweezers, scraping tool, wire brush, blade, power cord, metal pole holder with screws



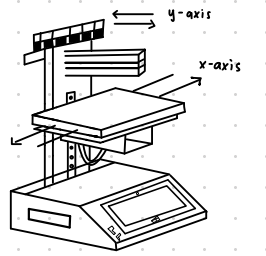
6: More Components: First Box = micrometer, fan, extruder. There could be more extruders if bought together.



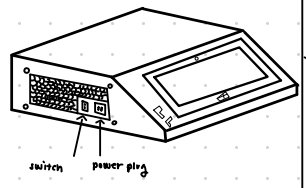
7) More Components: Filament, Bed, Glass Bed



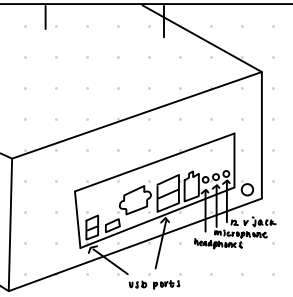
8) Put your tablet on the tablet stand and plug in the two cords accordingly



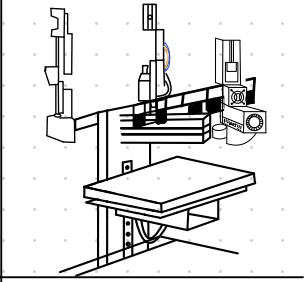
9) Check that the x-axis moves from left to right and the y-axis moves front and back.



10) The left side of the machine has a switch and the power plug.



11) The right side of the machine has four USB connection ports, 12 v jack, microphone and headphones jack



12) You can insert heads onto the yokes or you can store the on the top sides of the machine.
